TRIGG BUSHLAND INTERPRETIVE SIGNAGE

CITY OF STIRLING

Signs & Lines was proud to partner with the City of Stirling to deliver the new interpretive signage package for Trigg Bushland Reserve, creating an engaging and informative visitor experience that enhances appreciation of one of Perth's most significant coastal bushland environments.

The project involved the design, fabrication, assembly and installation of a comprehensive suite of signage that guides visitors through the reserve while providing educational information about the local environment, flora, fauna and the importance of conserving this unique natural landscape.

In total, the project comprised 52 individual signs, including three Trail Head Signs, one Identification Sign, 31 Interpretive Signs and 17 Directional Signs strategically located throughout the reserve. The completed signage network provides visitors with clear wayfinding while encouraging a deeper understanding and appreciation of the surrounding environment.

PROJECT SNAPSHOT

Project: Trigg Bushland Interpretive Signage

Location: Trigg Bushland Reserve, Trigg, Western Australia

Environment: External Signage

Client: City of Stirling

Date: June 2026

Features: Design, project management, fabrication, assembly and installation of 52 interpretive signs.

COLLABORATIVE PROJECT DELIVERY

From the outset, close collaboration between the City of Stirling and the Signs & Lines project management team was essential to the successful delivery of the project. Working within tight end-of-financial-year deadlines, our team established clear communication channels and detailed project schedules to ensure milestones were achieved and the installation programme remained on track.

Regular consultation with the client enabled design elements, messaging, locations and construction details to be refined throughout the process. This collaborative approach ensured the final signage package met both the functional requirements of the reserve and the broader objectives of the City's visitor experience strategy.

Our experienced project managers coordinated every stage of the works, from design development and approvals through to manufacturing, logistics and final installation.

DESIGN THAT ENHANCES THE ENVIRONMENT

The design intent for the Trigg Bushland signage was to create a family of signs that would sit comfortably within the natural environment while providing visitors with engaging and accessible information.

The interpretive panels incorporated a series of high-quality digitally printed images, illustrations and educational content that tell the story of the bushland reserve. The graphics were carefully integrated with the structural elements to create visually appealing signage that encourages visitors to pause, learn and engage with their surroundings.

Each sign was designed to balance durability, readability and aesthetics while ensuring the materials complemented the natural landscape. The result is a cohesive signage system that supports wayfinding and education without dominating the environment.

QUALITY MANUFACTURING AT MIDVALE

All fabrication and assembly works were undertaken at the Signs & Lines manufacturing facility in Midvale, where our skilled production team carefully constructed each sign to exacting standards.

The signs incorporated fabricated corten steel frames that provide both strength and visual appeal. The natural weathering characteristics of corten steel allow the structures to blend seamlessly into the bushland setting while offering exceptional durability in outdoor environments.

Our in-house capabilities allowed the project team to maintain complete quality control throughout the manufacturing process. Each sign was individually assembled, inspected and prepared for installation to ensure consistency across all 52 structures.

The City of Stirling team visited our Midvale facility during production, providing an opportunity to see firsthand the level of craftsmanship, attention to detail and teamwork involved in delivering the project. The factory visit further strengthened the partnership and gave the client confidence in the quality and progress of the works.

SAFE AND SUCCESSFUL INSTALLATION

Installation within environmentally sensitive areas requires careful planning and attention to detail. To ensure the highest quality outcome, Signs & Lines coordinated comprehensive ground scanning investigations and obtained engineering certification for the sign structures prior to installation.

These important preliminary works enabled our installation teams to proceed with confidence while ensuring compliance with engineering requirements and minimising disruption to the surrounding environment.

The installation programme required careful coordination across multiple locations throughout the reserve, with each sign positioned to maximise visibility, accessibility and visitor engagement. The result is a seamlessly integrated signage network that enhances navigation and interpretation throughout the site.

DELIVERING RESULTS FOR THE COMMUNITY

The completed Trigg Bushland interpretive signage project delivers significant long-term value to both the City of Stirling and the wider community. Visitors can now experience the reserve through an engaging combination of wayfinding, environmental interpretation and educational storytelling.

The project demonstrates the value of combining thoughtful design, quality manufacturing and professional project management to create public infrastructure that is both functional and visually appealing.

Despite the challenging timeframe, the Signs & Lines team successfully delivered the project prior to the end of the financial year, meeting all client requirements and maintaining exceptional quality standards throughout.

Following completion, the City of Stirling expressed their delight with both the process and the finished outcome. Their visit to our manufacturing facility reinforced the trust and collaboration that developed throughout the project.

PROJECT OUTCOME

At the conclusion of the works, the client described themselves as “delighted with the end result,” reflecting the successful partnership and the quality of the finished installation.

The Trigg Bushland Interpretive Signage project stands as another example of Signs & Lines' ability to deliver complex wayfinding and interpretive signage projects from concept through to installation, creating lasting assets that connect communities with the places around them.

A major launch event is planned for September 2026 allowing visitors to enjoy the signage and wonderful bushland first hand.

NEED MORE THAN JUST SIGNAGE

Our team offers a number of additional services that will help with your signage.

- **Design Concepts:** Maybe a wayfinding strategy or conceptual drawings for a new building or precinct. Let us create your next project.
- **Audits:** Full or partial audits of indoor or outdoor facilities. Is your signage working well? Let us give you the full story.
- **Aftercare & Maintenance:** Servicing or maintenance requirements with photos. Our technology solution will provide a detailed status.
- **Repairs:** Fix or repair existing signage. Plus a detailed report outlining signage issues & recommended fixes.

THE FINAL WRAP

The completed interpretive signage loops allow those users of the bushland to enjoy the area whilst being informed about local interest fauna, flora and historical facts – honoring the area's heritage while embracing the future.

Through clear, accessible and cohesive signage, Signs & Lines has helped bring clarity and connection to a large, bushland area ensuring it is welcoming and navigable.
